Triangle Manufacturing Company Enhances Product Offerings by Supplying Threaded Rods with Swage

Oshkosh, Wisconsin – [October 21, 2025] – Triangle Manufacturing Company, an industry-leading Oshkosh-based manufacturer specializing in bearings, stamped metal components, and threaded rods, proudly announces it is now supplying threaded rods with swage style stops. Adding these products to their lineup will yield significant time and cost efficiencies for manufacturers.

Recently, Triangle's Sales and Engineering teams conducted a strategic site visit a customer's facility. This visit aimed to ensure the seamless integration of threaded rods into the customer's assembly processes and to identify additional avenues for operational enhancement.

"We are always looking for ways to help improve our overall designs and incorporate our knowledge and flexibility to benefit our partners," Austin Flanders, Director of Sales and Marketing at Triangle Manufacturing said. "Our team took a visit and saw another opportunity to tweak a design that not just saves money, but also simplifies assembly for our customer's employees."

The collaboration led to the development of a custom swage style stop, integrated into Triangle's stainless steel threaded rods. By carefully reassessing the assembly process, Triangle designed this new feature, culminating in a more efficient component that streamlines the assembly procedure, enhances quality, and delivers cost reductions.

Triangle's swage style stops can be added to zinc/clear or stainless steel threaded rods with 5/16", 3/8", and 1/2" diameters. This underscores Triangle's commitment to offering diverse, customizable solutions.

About Triangle Manufacturing

With a legacy of innovation spanning over a century, Triangle Manufacturing has been synonymous with high-performance and durable components. The U.S.-based manufacturer remains committed to overcoming complex manufacturing challenges through innovative solutions that consistently exceed client expectations.
